

Our Data Centre Locations

Cloud Services only works with 100% uptime from the service provider, which is why we have always used Tier 2 rated data centres, ISO 27001 certified. We would love to say we own our own, but sadly not! We co-locate using a number of racks at two locations. We don't simply rely on one data centre to keep all our clients data safe, we also replicate all data to a second data centre.

City Reach London, hosts our Primary Data Store, then via a Layer Two 1Gbps interconnect, we replicate to our Second Data Store hosted in **County Gates Data Centre in Bournemouth**.

We only use our own Servers and Storage at both locations so you know exactly where your data is stored.

With us, you are assured of a safe, secure service with the knowledge that you will have support when you need it.

Specifications

Tier 2 Rating	✓	✓
Power - Minimum N+1UPS	✓	✓
Cooling – Minimum N+1AC	✓	✓
